

New CAS in Integrated Water Resource Management

February 15, 2011 | Andri Bryner

Topics: Organisation & Staff | Society

Together with the University of Applied Sciences in Bern and other universities and Non-Profit-Organisations Eawag offers a new CAS (Certificate of Advanced Studies) about “Integrated Water Resource Management” (IWRM). It is concerned with the process of promoting the coordinated development and management of water, land and related resources in order to maximize the resultant economic and social welfare in an equitable manner without compromising the sustainability of vital eco-systems.

Participants will be trained to consider water-related problems from an integrated and global point of view, derive and discuss possible solutions and propose potential activities in a local context. They will improve their management and monitoring skills with regard to water projects in Developing and Transition Countries.
