

Environment

It's a well-known dilemma: international research activities are of vital importance for scientists, but aircraft emissions contribute to climate change. As an environmental research institute, Eawag therefore wishes to reduce business air travel.

Since 2020, under an internal directive, staff have been required to travel by rail rather than air for journeys of up to 1,000 kilometres. And since 2019, Eawag has had its own videoconferencing facility, making it much easier for researchers to conduct remote meetings.

Energy consumption per capita

Energy consumption MWh/FTE
Renewable energy share in per cent

Electricity generation and greenhouse gas emissions

Solar power MWh
Greenhouse gas emissions in t CO₂-eq
