

## SCS Section Chemistry and the Environment

The SCE represents scientists from all fields of fundamental and applied research in environmental sciences and regulatory experts and acts on their behalf in national and international organizations. The Section's activities include all research areas related to chemical processes that molecules undergo in the environment and their impact on the environment. It includes atmospheric, aquatic and soil chemistry, and the effect of molecules on living organisms.

The aims of the Section are

- Organizing meetings, seminars, workshops and lectures.
- Providing a networking platform for scientists of environmental chemistry to exchange ideas and expert knowledge between academia, industry and regulatory experts.
- Spreading information through the community and promoting activities of partner organizations.
- Representing SEC scientists' interests in national and international organizations.
